

PALUX Maître

Price-list

Prices valid from 1st February 2023

All indicated prices are list prices and are valid for a delivery within 6 weeks after placement of the order. If delivery has to be made later than 6 weeks after placement of the order, the prices will be adjusted according to the then valid price-list. All prices are per item. Our terms of delivery are: EXW Bad Mergentheim (according to Incoterms 2010), packing for land transport included, excluding vat. The prices mentioned in this price-list do not include installation of the appliances or VAT.

Subject to changes in power, dimensions and construction.

Planning Tool - Important Requirements

- The length of the work top (item 1) respectively the length of the range is the result of the summary of the dimensions of the elements (items 2) recommended (measures L1/L2/D) in the planning tool.
- The maximum length of a range is 5.200 mm because of manufacturing reasons. It is possible to weld together longer ranges on site.
- The operation panel below the work top is standardized executed as stainless steel panel (item 8). The operation panel can be lacquered in various RAL – colors. A individual design of the side walls is possible. Contact us for your ideas, please.
- For the electrical installation base cabinet of 200, 300 or 400 mm length with space for 6, 10 or 14 connections must be included in the design
- The electric connection box as well as the other energy connections to be implemented in the installation base cabinet which should have access through the side panel or through a removable installation panel on the front side. Installation base cabinets of water, gas and electricity should be separated from each other (own base cabinet for each) .
- Base cabinets (item 4) can be chosen from the "Standard" base cabinet, or the "Hygiene H2" base cabinet. A wide range of heated cabinets are also available.
- The induction generators can be installed either in the base cabinets (PALUX Generator base cabinets) or somewhere externally. It is not possible, to arrange Generator base cabinets crosswise, due to the cooling ventilation air flow. Standard length of the connection cable is 2.5 m. As option is an extended cable available to install the generators outside of the range (e. g. cellar). Maximum allowed distance from the Generator to the range is 4.0 m. Longer distances to be approved individually. External generators are not available for Induction Griddles.
- Below a Vario Pan, Steakgrill or under a Hot Plate an open base cabinet is necessary due to drainage system (Base for the planning are the measurement of the modules indicated in the Planning Tool)
- Also for Deep Fat Fryers and Pasta Cookers special base cabinets with wing doors are required (item 3).
- Bain-Maries in base cabinets must equipped with a 150 mm operation panel in the base (item 3), which fit to the operation of the drain valve.
- The side panels (item 5) are covering the base functions on the left and right hand side and to be calculated separately.
- The length of a stainless steel plinth (item 6) has to be calculated per metre of length of the range.
- Accessories as for mixer support, mixing taps, sockets (item 7) are listed in the chapter options and accessories.
